

Ideation Phase

Brainstorm & Idea Prioritization Template

Date: 24 June 2026

Project Name: Visualization Tools for Electric Vehicle Charge and Range Analysis

Step 1: Team Gathering, Collaboration and Select the Problem Statement

The team discussed challenges in understanding electric vehicle charging infrastructure and vehicle range data. After evaluating several ideas, we selected the problem of analyzing EV charging stations, vehicle specifications, efficiency, and range using visualization tools. The objective is to transform raw data into meaningful dashboards that help users compare EV brands, charging infrastructure, and performance.

Step 2: Brainstorm, Idea Listing and Grouping

Ideas generated included: analyzing charging station distribution by region; comparing EV brands and available models; visualizing vehicle range, battery capacity, and efficiency; identifying the top 10 most efficient EV brands; building interactive dashboards with filters; creating a Tableau Story to present insights; and preprocessing data using SQL before visualization. These ideas were grouped into Data Cleaning, Data Analysis, Dashboard Development, and Storytelling.

Step 3: Idea Prioritization

The team prioritized ideas based on impact, feasibility, and usefulness. The highest priority was developing interactive Tableau dashboards after proper SQL preprocessing. Key dashboards include Charging Stations by Region, EV Models by Brand, Top 10 Most Efficient EV Brands, and EV Treemap. The final project delivers clear insights into electric vehicle charging infrastructure and range analysis through interactive visualizations.
