

Project Design Phase

Solution Architecture

Date: 24 June 2026

Project Name: Visualization Tools for Electric Vehicle Charge and Range Analysis

Solution Architecture Diagram

Architecture Description

The solution imports EV datasets from CSV/Excel files into a MySQL database. SQL is used for data cleaning, preprocessing, and analysis. The processed data is connected to Tableau to create interactive dashboards, charts, and stories. Users can explore charging station distribution, EV models, efficiency, range, and other insights through the Tableau dashboards.
